Ender 5 Pro Duet 2 Wifi, Hemera, Bltouch, Firmware 3.0

Saturday, April 18, 2020 10:14 AM

This is my detailed guide to upgrade a Creality Ender 5pro with Hemera and Bltouch from Creality silent board 1.15 to Duet 2 Wifi with Firmaware 3.0 The printer run silently and without major issues, but the reduced menus and lack of wifi connectivity were enough reasons to upgrade. I had the printer for only 4 months. It is time to work with the Pros.

I am struggling with several things

Endstops Homing Bed Compensation

Here is my story recorded. Once we made it right I plant to post this guide corrected for others that like to follow later

Let's start with a picture. I have extended the X axis by displacing the front bar of the printer to recover the space lost by the hemera volume By Bed dimensions are 220 X 220 X 300 mm

I am using the RepRap configuration tool

Welcome to the RepRapFirmware Configuration Tool

Please follow this wizard to obtain an individual configuration bundle for your printer

If you are using a printer that was original	ly shipped with RepRapFirmware, you can select a predefined template here:	
🔿 T3P3 Mini Kossel		
RepRapPro Ormerod 1		
 RepRapPro Ormerod 2 		
RepRapPro Fisher		
Creality Ender 3 Pro		
The following machine templates were co	ntributed by users and have not been throughly tested:	
🔿 Anet A8		
O Distech Prometheus System		
Reach3D Printer		
🔿 Wanhao Duplicator i3		
Alternatively, you can create your own ind	lividual configuration by creating a new one from scratch or by loading an existing JSON template:	
• Custom configuration		
 Use existing configuration 		
No	ote: If you encounter problems, please report your problems on GitHub.	
	ration options may not be available yet. In this case please refer to the Duet3D wiki.	
Source countigat	ation options may not be available yet. In this case please refer to the DuetSD with.

* Default Jerk (mm/s)

* Override with M205 X Y Z E

*

* "Jerk" specifies the minimum speed change that requires acceleration.

* When changing speed and direction, if the difference is less than the

* value set here, it may happen instantaneously.
